

TECHNICAL DATA SHEET

CONCRETE FORM RELEASE (CFR)

PRODUCT DESCRIPTION: Concrete Form Release

CONCRETE FORM RELEASE (CFR) is a revolutionary product that provides efficient concrete release from various forms. It does so without the use of petroleum distillates and/or terpene hydrocarbons, making it 100% non-toxic and biodegradable. Its exceptional performance, easy clean-up and unrivaled safety profile makes it the only concrete form release to receive a letter of recommendation from the US Army Corps of Engineers. CFR is non-fuming, non-flammable, and water soluble, which makes for easy clean-up. Finally, it carries a triple zero Hazardous Materials Information Score. Simply apply and rinse. No neutralizing step is needed.

APPLICATION

Make sure surface of form is as clean as possible. Removal of hardened concrete can be safely accomplished with the use of ECO-ETCH. Apply CFR evenly and completely to the entire surface of the form. A fine spray is optimum. Re-apply after each form is released.

TYPICAL PHYSICAL PROPERTIES

➤ Appearance.....	Liquid
➤ Color.....	Light Yellow to Colorless in Color
➤ Odor.....	Mild Soapy
➤ Solubility.....	100%
➤ pH Neat.....	9.5-10.5
➤ Specified Gravity.....	0.78
➤ Boiling Point.....	490°F

STORAGE AND HANDLING

Ingredients not precisely identified are non-hazardous.

PACKAGING

CONCRETE FORM RELEASE is shipped from the manufacturing facility and regional distribution centers in 5 gallon, 55 gallon and 275 gallon containers. Bulk quantities are available upon request.
